

Dear Partner,

After the decommissioning of SPOT 5 back in 2015 after 13 years of outstanding service, it is with mixed emotions that we inform you that Airbus DS Geo SA has taken the decision to stop the production and distribution of SPOT 1 to 5 satellite imagery.

From 1 August 2020, SPOT 1-5 data will no longer be available in our catalogue, therefore it will not be possible to order this through our GeoStore web ordering portal or traditionally through our customer services team.

As a consequence and in accordance with the terms and conditions of your reseller contract, SPOT 1-5 data will now be removed from your reseller portfolio and will be unavailable for resellers going forward from this date.

Nevertheless, derived off-the-shelf SPOT5 products, such as SPOTMaps or Elevation30, are still available to order.

This historical SPOT constellation has been successfully operational across the last three decades, collecting from 20m to 2.5m high-resolution data spanning over 100 billion km<sup>2</sup> and covering more than 700 times the Earth's land mass.

Keeping a watchful eye on our changing planet, SPOT 1-5 satellites have served many applications from defence to environment, not to mention mapping and agriculture. It also enabled our company to revolutionise the satellite imagery market, being the first to offer tasking services for commercial requests.

If you have any further questions, please do not hesitate to contact our reseller sales managers or our customer services team.

With kind regards,

**Manuel LAGARDE**  
Vice President  
Head of Marketing & Sales
